                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A human-mouse chimeric antibody light chain has a human K102 framework contg. complementarity determining regions (CDRs) from the variable light (VL) chain of a murine monoclonal antibody (MAb 1308F) against respiratory syncytial virus (RSV) glycoprotein F antigenic site C. CDRs from MAb 1308 VL (AAR92083) were grafted into the human HV3 VL region (AAR92081) to produce CDR-grafted VL (AAR92082). A similar procedure was used to obtain CDR-grafted VL (AAR92089). The humanised antibody is used to treat RSV infection. (Updated on 16-OCT-2003 to standardise OS field)

The humanised antibody is useful for preventing or treating a respiratory syncytial virus infection. The antibody can be injected which is preferable to prior art treatment methods involving intravenous transfusions. The present

Similar procedures were used to obtain humanized 1308F VH for the construction of anti-RSV F protein humanized antibody. (Updated on 25-MAR-2003 to correct PN field.)

DNA (AAT16181) coding for CDR-grafted VL-encoding region, Hul308 VL (AAR92085), was synthesized using overlapping oligonucleotides. The construct was used with Hul308 VH (see AAR92084) for prodn. in COS-1 transfectants of humanised antibody useful for treatment of RSV infection

The humanised antibody is useful for preventing or treating a respiratory syncytial virus infection. The antibody is also useful for diagnosing RSV infection. The antibody can be injected which is preferable to prior art treatment methods involving intravenous transfusions. The present sequence represents a human-murine chimeric antibody

The method is useful for treating autoimmune diseases, especially systemic lupus erythematosus, rheumatoid arthritis, psoriasis or type I diabetes. The present sequence represents a specifically claimed humanised anti-CD5 immune-libration chain variable.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 pemphigus vulgaris; diabetes mellitus type 1;

commain comprising an amino acid sequence modified at low risk positions couch that each amino acid residue in a low risk position in the light or cheavy chain variable region sequence of the domain is same as the amino could residue at the corresponding position of a selected antibody light or corresponding position of a selected antibody light corresponding sequence or consensus sequence. The polypeptide of the invention demonstrates immunosuppressive, dermatological, antitheumatory, antidiabetic, antithyroid, antipsoriatic, antitheumatory, antidiabetic, antithyroid, antipsoriatic, fungicide and virucide activities. The polypeptide may be useful for treating autoimmune diseases including systemic lugus continued to the polymental partities and sepondylarthritis, thyroiditis, thyroiditis, corresponding to the polymental partities and spondylarthritis, thyroiditis, corresponding to the polymental partities and primary bowel disease including Crohn's corresponding to the partities and primary corresponding to the partities and primary corresponding to the partities and 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel protein containing modified variable domain comprising amino acid sequence modified at low risk positions in heavy or light chain amino acid residue at corresponding position of native antibody sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             invention relates to a novel protein containing a modified variable ain comprising an amino acid sequence modified at low risk positions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ID NO 27; 80pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RESULT 15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC The present invention describes chimeric antibody (Ab) heavy (H) chains CC containing the variable region of the H chain of a mouse monoclonal Ab CC recognising human tissue factor (hTP) and the constant region of the H CC chain of a human Ab. The variable region is one of six specified CC Ab's ATR-2,3,4,5,7 or 8). Also described are chimeric Ab light (L) chains CC containing the variable region of the L chain of a mouse monoclonal Ab CC recognising human tissue factor (hTP) and the constant region of the L chain of a mouse monoclonal Ab CC chain of a human Ab, the variable region being one of six specified consequences (which are the L chain variable regions from mouse monoclonal Ab Ab S ATR-2,3,4,5,7 or 8). The chimeric Ab's can be used for the treatment and prevention of thrombotic disease, especially of disseminated intravascular coagulation (DIC). The humanised antibody has the high hTP CD inding activity of the mouse monoclonal antibody but greatly reduced communogenicity. AAZ33001 to AAZ33091 and Y527007 to AAY52767 represent are constant invention.

                                                                                                               5
                                                                                                                                                                                                                                   The present invention describes an experimental animal model transplanted with animal cells expressing human tissue factor or a fragment of it, with accelerated blood coagulation. Also described are: (1) selecting an animal model; (2) screening for anti-thrombotics; (3) treatment and prevention of accelerated blood coagulation; and (4) polyclonal and monoclonal antibodies or their fragments. The animal model is useful in the search and development of remedies for diseases associated with the sustained acceleration of blood coagulation such as that caused by infection, venous thrombosis, arterial thrombosis and disease caused by vascular medial thickening. Antibodies from the present invention against human tissue factor (TF) (e.g. anti mouse monoclonal antibody ATR-5 and humanised ATR-5) can be used in the treatment and prevention of accelerated blood coagulation, thrombosis and blood vessel thickening. AAF87837 to AAF87917 and AAB74968 to AAB74990 represent nucleotide and protein sequences which are used in the exemplification of the present
                                                                                                                                                        Query Match

Proc. Natl. Acad. Sci. U.S.A. 80:4837-4841(1983).

1- MISCELLANEOUS: This chain was obtained from a monoclonal antibody against 3,4-pyruvylated galactose and isolated from a patient with Maldenstrom's macroglobulinemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MEDLINE=83273707; PubMed=6410398;
